Electrical Specifications

The Product specifications describe the Absolute Instrumental Uncertainty of the Product. The Product specifications include stability, temperature, and humidity; within specified limits, linearity, line and load regulation, and the reference standard measurement uncertainty. The Product specifications are provided at a 99 % confidence level, $k=2.58$, normally distributed, unless otherwise stated.

The relative specifications are provided for enhanced accuracy applications. To calculate an enhanced absolute specification from the relative specification, it is necessary to combine the uncertainty of your external standards with the pertinent relative specifications. Specifications are valid after allowing a warm-up period of 30 minutes, or twice the time the Product has been turned off.

[1] For 9.5 to 10 Hz, the specifications is $\pm(1000 \text{ ppm of reading} + 1.5 \mu\text{V})$

[2] For 9.5 to 10 Hz, the specifications is $\pm(1000 \text{ ppm of reading})$

[3] Inputs >100 kHz and with a V*Hz product >2.2E7 are typical.

[4] Typical specification, as determined by sourcing with the Fluke 5205A Precision Power Amplifier.

[5] Inputs >30 kHz and >750 V are typical, as determined by sourcing with the Fluke 5205A Precision Power Amplifier.

Note: The Product is to be used in controlled environments. For disturbances on the mains power supply of >0.5 Vrms from 10 MHz to 40 MHz, add 5 ppm to the 2.2 V range.

[1] Range limits same as INPUT 1 or INPUT 2.

[2] Relative to 1 kHz, for 2-year specification multiply by 1.5.

[3] Add to flatness specifications when more than 3 °C from calibration temperature.

[4] At input connector.

[5] Applies to 5790B/5 & 5790B/AF only.

[6] Maximum amplitude is limited to 3.5 V.

Wideband Characteristics

5790B/AF

The 5790B/AF absolute specification is $\pm$ 0.23 % of voltage reading (1 year, 23 °C $\pm$ 3 °C, 95 % confidence level ($k=2$), normally distributed). Specification applies to 50 MHz, 223.61 mV, referenced to the end of the provided serialized 0.91 meter (3 ft) cable. When using the cable and 50 MHz Cable Correction, other ranges and frequencies can be measured but the Product is only specified within $\pm$ 4 % of frequency and amplitude stated.
