

JOB OPENING Calibration Engineer

Have you always wanted to work in a committed team with the high-quality pressure standards that are available on a daily basis?

Minerva has a vacancy for a calibration engineer in its ISO17025 accredited laboratory in Amersfoort.

A calibration engineer is a person who studies and practices the science of measurement. He or she spends much of the daytime in practicing and developing methods of measurement used in calibration. A calibration engineer must have a good understanding of physics, instrumentation, automation, metrology and how to perform calibrations.

What does a calibration engineer at Minerva do?

The Calibration Engineer:

- plans and executes calibration jobs with team members
- maintains (corrective, pro-active and adaptive) the Minerva calibration laboratory and related administrative duties
- assures cleanliness of the Minerva calibration laboratory
- maintains and develops personal effectiveness for himself and detect shortage of effectiveness with other staff members
- maintains and develops expertise on calibration techniques and practices
- issues and signs calibration certificates and archive
- participates in calibration job quotes according to the operational procedures in place
- understands and utilizes the lab planning tool to effectively manage resources and workflow in line with daily/weekly/monthly targets
- understands (and assists) the planning process of work and revenue
- ensures that weekly/monthly targets can be realized and provide reporting of work and 'blockers' that inhibit
- assists the Laboratory Team Lead in respect to planning and in his absence takes over the planning

Key competencies

- utmost professionalism
- MSc or BSc grade in Engineering or other relevant Technical Study
- specific knowledge on Calibration standards and practices.
- 5 – 10 years' experience in Professional Calibration
- auditing experience (conducting and hosting)
- motivating and dynamic
- familiar with statistics
- time and workload management
- languages: Business Professional level in English
- effective communication skills across all levels in business
- keen eye for detail.
- integrity

Location

This is a full-time (40 hours) position based at the Minerva office-workshop in Amersfoort.

Salary and other conditions

Minerva offers an appropriate salary for the position and experience. Minerva has a collective pension scheme in which the employer contributes 50% of the premiums. On an annual basis, 200 hours (25 days) of paid vacation are offered.

Profile Minerva Meettechniek B.V.

Our team has one goal: to provide our customers with premium pressure calibration products and services. To ensure worry-free, reliable traceability from vacuum to very high pressure.

Minerva is an internationally renowned and appreciated company with a loyal, demanding and growing customer base. Our customers come from industries such as aerospace, process instruments, oil and gas, energy production and pharmaceuticals and includes multiple national measurement institutes. Our pressure calibrations are ISO/IEC 17025 accredited.

Our values

We pay attention to each other and our customer. Our core values are integrity, involved, innovative, skilled and service oriented. We live by these core values and annually measure to what extent our brand promise and core values are experienced by our customers. This keeps us sharp and ensures improvements so that our customer experiences a better service.

Our mission

Minerva Metrology and Calibration provides high-quality calibration services, where our customers can count on 'carefree traceability': reliable traceability and the certainty that they hand over their instruments to experts.

Our vision

It is our ambition to be known and recognized worldwide as a high-quality metrology partner. We do our best every day to be a reliable and transparent partner for our customers. To provide them with innovative calibration services without having to worry about anything.

Originally Minerva was active in the automotive industry. This has been further developed over the years and since the 1980s we have been active exclusively in the high-end pressure metrology market.

Our focus is now on providing excellent high-end and high-precision pressure calibration instruments and their service and support. We are satisfied when our customers can work accurately and safely with as little downtime as possible.
